```
b3=[-4];

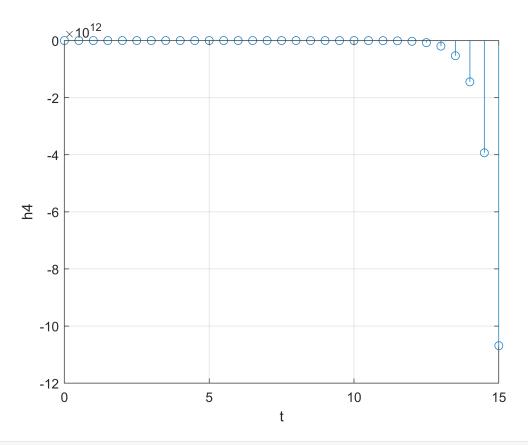

a3=[1,0,-4];

[r3,p3]=residue(b3,a3);

t=[0:0.5:15];

h4=r3(1).*exp(p3(1).*t)+r3(2).*exp(p3(2).*t);

stem(t,h4);xlabel('t'),ylabel('h4');grid on;
```

%对于这问, 我有疑惑, 从理论上算 h3(t)应该为 exp(-2*t)*u(t)-exp(2*t)*u(t),不收敛, 不可积
